Prediction at session t (all solid-arrow quantities are $\mathcal{F}_{t-1}$-measurable)
Causal inputs
returns $< t$
sector map; VIX
Forecast + scale
$\hat{r}_{i,t}$
lagged $\hat{\sigma}_{i,t}$
Asset expert
$q^A_{i,t}$; 126 sessions
Sector expert
$q^S_{i,t}$; 63 sessions
Market expert
$q^M_{i,t}$; 5 sessions
Sector Hedge
$q^{mix} = \sum_j w_{g,t,j} q^j$
$w^+ \propto we^{-\lambda z}$
Feedback
$q = q^{mix} + c_{g,t}$
$c^+ = c + \eta(\bar{e} - \alpha)$
Issue
$C_{i,t}$
90% interval
Observe after issue
$r_{i,t}$ and valid-asset mask
Dashed arrows: append scores and update expert losses / sector miss
using observed assets only
